

DAVID PIMENTA

Technical Portfolio

A collection of personal projects and hands-on experience building, configuring and troubleshooting Windows-based computer systems.

Technical Highlights

- Built multiple custom desktop PCs from individually selected components.
- Performed numerous clean Windows installations using DiskPart and bootable USB media.
- Configured BIOS settings, XMP memory profiles and firmware updates.
- Installed and troubleshoot chipset, graphics, audio and networking drivers.
- Diagnosed Windows issues using Registry Editor, Windows Services, Safe Mode and System File Checker (SFC).
- Configured a home router using OpenWRT.
- Validated systems using HWiNFO and CrystalDiskInfo.
- Created virtual machines, used Remote Desktop and regularly assisted friends and family with technical issues.

2023 • First Custom Build

My first complete PC build, where I developed the fundamentals of hardware assembly, Windows installation, component compatibility and system configuration.

2025 • Progression Build

Focused on improving cable management, airflow planning, component selection and overall build quality while continuing to refine troubleshooting and validation skills.

2026 • Current Build

Latest enthusiast-grade build featuring improved cable management, BIOS configuration, Windows deployment, firmware updates, driver installation and post-build system validation.
